Abstract

This research aims to provide applied examples explaining the entities, properties, and relationships in the FRSAD model. These examples were derived from Arab authority control systems for subjects according to certain controls. It includes the multilingual authority file of the Library of Alexandria, the Standard Arabic Subject Heading List for Libraries, Information Centers, and Databases, 2002 edition, and the Expanded Thesaurus, 2001 edition. This diversity aims to achieve comprehensive coverage of all elements in the FRSAD conceptual model.

Keywords

FRSAD, subject headings, authority files
